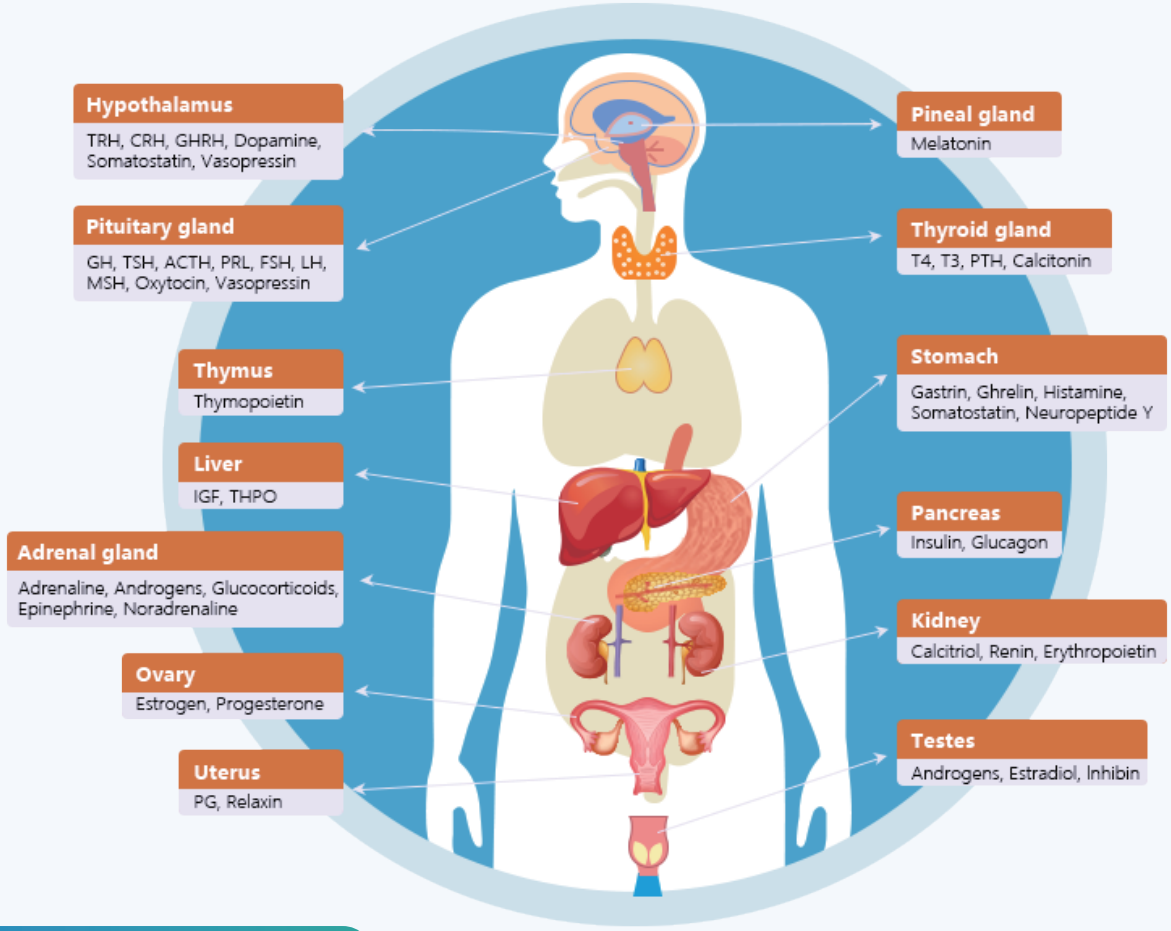
Hormone

Hormones are important substances for maintaining human life. They are a kind of bioactive molecules secreted by endocrine glands or other cells, and can arrive to every parts of the body to regulate by blood or lymphatic circulation.

There're various hormones, playing different roles in human body. (e.g. metabolic regulation, growth and development, reproduction, immunity, stress etc.) Abnormal secretion of hormones can cause many diseases, e.g. insulin deficiency-induced diabetes; higher thyroid-hormone induced hyperthyroidism etc.

Common Hormones in Human Body

Common hormones include thyroid hormones, insulin, estrogen and progesterone, testosterone, adrenaline and norepinephrine, growth hormone etc.



Detection Technology

Detection technologies for hormones mainly include ELISA, radioimmunoassay, mass spectrographic analysis and biosensor technology. ELISA is a rapid, accurate and sensitive detection technology, and widely applied in clinical medicine and biological sciences, including detections for biomacromolecules(e.g. hormones, proteins, antibodies etc).

FineTest develops a series of hormone ELISA kits for thyroid hormones, insulin, estrogen, and progesterone etc, which are widely applied in scientific research.

Function	Target	Cat.NO	Species	Product Name
Blood glucose regulation	Insulin	EMR0002	Mouse/Rat	Mouse/Rat INS (Insulin) ELISA Kit
		EM2521	Mouse	Mouse HS-INS (High sensitive Insulin) Accquant ELISA Kit
		EB3003	Bovine	Bovine INS (Insulin) ELISA Kit
		EM20004	Mouse	Mouse HS-INS (High sensitive Insulin) Accquant® ELISA Kit
		ER20002	Rat	Rat HS-INS (High sensitive Insulin) Accquant® ELISA Kit
